

CHAPTER 7

RESULTS

After executing above command will get below server screen

```
Command Prompt - python manage.py runserver
_np_quint16 = np.dtype(["quint16", np.uint16, 1])
C:\Users\Admin\AppData\Local\Programs\Python\Python37\lib\site-packages\tensorboard\compat\tensorflow_stub\dtypes.py:545:
FutureWarning: Passing (type, 1) or '1type' as a synonym of type is deprecated; in a future version of numpy, it will be
understood as (type, (1,)) / '(1,)type'.
_np_qint32 = np.dtype(["qint32", np.int32, 1])
C:\Users\Admin\AppData\Local\Programs\Python\Python37\lib\site-packages\tensorboard\compat\tensorflow_stub\dtypes.py:550:
FutureWarning: Passing (type, 1) or '1type' as a synonym of type is deprecated; in a future version of numpy, it will be
understood as (type, (1,)) / '(1,)type'.
np_resource = np.dtype(["resource", np.ubyte, 1])
System check identified no issues (0 silenced).

You have 15 unapplied migration(s). Your project may not work properly until you apply the migrations for app(s): admin,
auth, contenttypes, sessions.
Run 'python manage.py migrate' to apply them.
June 13, 2020 - 16:38:06
Django version 2.1.7, using settings 'PlantDisease.settings'
Starting development server at http://127.0.0.1:8000/
Quit the server with CTRL-BREAK.
_
```

In above screen python server started and running on IP <http://127.0.0.1:8000>. Now open browser and enter URL as '<http://127.0.0.1:8000/index.html>' to get below screen

In above screen click on 'Register Here' link to allow user to register with the application

In above screen click on 'Register' button to add new user

In above screen user signup process completed. Now user can click on 'Login' link to login to application

After login will get below screen

In above screen click on 'Upload Plant Image' link to get below screen

In above screen user can upload image of his crop to predict disease using CNN

In above screen uploading

1.JPG image and now click on 'Open' button to upload image

In above screen click on 'Submit' button to predict disease

In above screen we will get image with predicted disease name printed on image and now close that image to get locations in map

In above screen in map we can get location of uploaded image mark with marker and below map we can see predicted disease name in red colour. Similarly you can upload any image from 'upload images' folder. In below screen we can see CNN layers created to build plant disease model

```

Command Prompt - python manage.py runserver
backend.py:4070: The name tf.nn.max_pool is deprecated. Please use tf.nn.max_pool2d instead.
WARNING:tensorflow:From C:\Users\Admin\AppData\Local\Programs\Python\Python37\lib\site-packages\keras\backend\tensorflow_backend.py:422: The name tf.global_variables is deprecated. Please use tf.compat.v1.global_variables instead.

Model: "sequential_1"
Layer (type)                 Output Shape                 Param #
=====
conv2d_1 (Conv2D)             (None, 62, 62, 32)          896
max_pooling2d_1 (MaxPooling2 (None, 31, 31, 32)          0
conv2d_2 (Conv2D)             (None, 29, 29, 32)          9248
max_pooling2d_2 (MaxPooling2 (None, 14, 14, 32)          0
flatten_1 (Flatten)           (None, 6272)                 0
dense_1 (Dense)               (None, 128)                  802944
dense_2 (Dense)               (None, 15)                   1935
=====
Total params: 815,023
Trainable params: 815,023
Non-trainable params: 0
None

```

In above screen we can see CNN multi layers filter created where first filter created with image size 62 X 62 and second filter with size 31 X 31 and goes on.
